## Abstracts

The polyethylene extrusion market is estimated to grow at a CAGR of 2.58% during the period 2018-2024. Polyethylene (PE) is the most common used plastic material and is extruded into a variety of forms that includes pipes, films and sheet, and profiles. Continued use of PE extrusions in packaging, bottles, and food containers is driving the PE extrusion market growth. However, ban on single-use plastic in many countries is restraining the demand for PE based bags, and straws which is significantly impacting the PE extrusion market growth. Thus, the market is expected to grow at a steady pace over the forecast period on account of steady adoption of bio-based PE material in plastic processing. Geographically, developing regions like Asia Pacific and Middle East are anticipated to witness good growth on account of the growing demand for PE, which is positively impacting the PE extrusion market growth.
