Global pressure transmitter market is expected to grow at a CAGR of 4.39% over the forecast period to reach US\$4.206 billion by 2023, from an estimated value of US\$3.392 billion in 2018. A pressure transmitter is a device used to measure liquid or gas pressure. Due to rise in industrial machinery and consumer electronic appliances, there has been burgeoning demand for pressure transmitters. Rising demand for touch-screen smartphones and computing devices is also augmenting the demand for pressure transmitters worldwide.

The matured automotive industry along with expanded industrial market in Americas region will fuel the demand for pressure transmitter over the forecast period. The pressure transmitter industry in Brazil will also gain momentum owing to growing offshore production activities. Asia Pacific is projected to witness the fastest growth due to rise in manufacturing hubs and increased oil & gas exploration activities. However, the requirement of huge investment for R&D activities in pressure transmitter industry is hampering the growth of the market.
