The research antibodies market is estimated to be valued at US\$1.032 billion in 2018 and is projected to grow further in the coming years. Research antibodies react to the presence of specific antibody make them indispensable tool for the clinical as well as basic researches. Due to the high specificity and selectivity of the antibodies, they are being used in wide variety of applications such as biochemical tools for a range of applications including selection, identification, purification and as therapeutics. Routine procedures such as western blot, flow cytometry, immunohistochemistry (IHC), enzyme-linked immunosorbent assay (ELISA) and many others also rely on these antibodies. Rising investments for the research and development of the research antibodies coupled with the growing industry-Academia collaboration will drive the market during the given forecast period. Rising demand for the personalized medicine and protein therapeutics will also boost the market growth. However, rising quality concerns regarding these antibodies and large amount of time and cost might restrain the market of research antibodies during the given time frame.
