## Abstracts

Silica sand market is projected to grow at a CAGR of 7.44% during the forecast period, reaching a total market size of US\$11.054 billion in 2024 to US\$7.186 billion in 2018. Silica is one of the most common varieties of sand that is found on earth. It is used for a variety of purposes like filtering water, manufacturing of glass, blasting of sand, building roads, casting in industries, and painting and coating. Silica is popular due to the properties like high silica content, resistance to heat, and resistance to chemical reactions. The growth of the silica sand market can be substantiated to the growing urbanization and growing per capita income which is increasing the construction spending and manufacturing, leading to the use of silica sand. It could also be tracked to the rise in hydraulic fracturing activities because of the rising shale gas and shale oil exploration so that the dependence on crude oil can be reduced. Furthermore, government support is also boosting the demand for silica sand. However, illegal sand mining and the development of sand-free construction products are a concern for the market.
