Abstracts

The US AI for Predicting Pandemics and Global Health Emergencies market is forecast to grow at a CAGR of 18.5%, reaching USD 2,118.4 million in 2031 from USD 907.3 million in 2026.

The US AI for Predicting Pandemics and Global Health Emergencies market is positioned at the intersection of national biosecurity, public health modernization, and advanced computational epidemiology. Following the COVID-19 crisis, federal and state authorities have shifted from reactive disease reporting toward predictive, real-time intelligence systems. This strategic pivot has created a non-discretionary procurement environment centered on AI-driven surveillance software capable of synthesizing clinical records, syndromic surveillance feeds, mobility data, and open-source intelligence. The market is increasingly defined by validated, trustworthy models that enable preemptive intervention and informed resource allocation. Public sector mandates, regulatory oversight, and data modernization initiatives collectively anchor long-term structural demand.

Drivers

Sustained federal and state funding is a primary catalyst. Public health modernization programs are explicitly integrating AI and machine learning for real-time analysis of emergency department data and automated categorization of unstructured information streams. The institutionalization of these capabilities validates AI procurement as a core operational priority rather than an experimental initiative.

The demonstrated success of early outbreak detection platforms has established

predictive intelligence as an essential capability. AI systems can process multilingual, unstructured data at scale, including news feeds, social media, and professional forums, delivering actionable signals ahead of laboratory confirmation. This speed and scalability significantly exceed traditional manual surveillance methods.

Demand is also expanding beyond early detection. Agencies increasingly require integrated risk modeling tools that support health resource allocation, supply chain continuity, and hospital capacity forecasting. This shift broadens the addressable market from alert-based systems to full-spectrum pandemic preparedness platforms.

Restraints

Trust and model bias remain critical constraints. Government entities require validated, transparent algorithms with explainable outputs. Uncertainty surrounding lifecycle management of continuously learning models can delay procurement decisions.

Data security, interoperability with legacy systems, and compliance with healthcare regulations such as HIPAA increase implementation complexity. Additionally, the limited availability of professionals skilled in both epidemiology and advanced AI constrains deployment speed.

Technology and Segment Insights

By component, the market is dominated by Software and Services. Natural Language Processing tools are central to unstructured data extraction, while machine learning models drive predictive analytics and scenario modeling. Hardware plays a limited role compared to computational infrastructure delivered via cloud platforms.

By application, Outbreak Prediction and Detection remains the foundational segment. However, Disease Surveillance, Risk Assessment, Public Health Resource Allocation, and Health Trend Forecasting are gaining momentum. Solutions capable of correlating symptom clusters with travel data and demographic trends provide strategic value.

By deployment mode, cloud-based systems lead due to scalability and cross-agency collaboration benefits. On-premises solutions remain relevant for agencies prioritizing strict data sovereignty controls.

By end user, Government and Public Health Agencies represent the largest demand center. Hospitals, research institutions, pharmaceutical companies, and academic

organizations contribute secondary growth.

Competitive and Strategic Outlook

The competitive landscape includes specialized start-ups and divisions of global technology firms. Differentiation hinges on proven early detection records, regulatory alignment, and seamless integration with public health data pipelines. Vendors are investing in explainability features and interoperability frameworks to meet procurement requirements. Strategic partnerships and acquisitions are consolidating data assets and expanding computational capacity. As regulatory frameworks mature, vendors that combine predictive accuracy with compliance readiness will secure long-term federal contracts.

The US AI for Predicting Pandemics and Global Health Emergencies market reflects a structural transformation in national health preparedness. Sustained funding, regulatory clarity, and operational validation support continued double-digit growth. Organizations delivering secure, transparent, and scalable AI platforms will define the next phase of pandemic resilience infrastructure.

Key Benefits of this Report

Insightful Analysis: Gain detailed market insights across regions, customer segments, policies, socio-economic factors, consumer preferences, and industry verticals.

Competitive Landscape: Understand strategic moves by key players to identify optimal market entry approaches.

Market Drivers and Future Trends: Assess major growth forces and emerging developments shaping the market.

Actionable Recommendations: Support strategic decisions to unlock new revenue streams.

Caters to a Wide Audience: Suitable for startups, research institutions, consultants, SMEs, and large enterprises.

What Businesses Use Our Reports For

Industry and market insights, opportunity assessment, product demand forecasting, market entry strategy, geographical expansion, capital investment decisions, regulatory analysis, new product development, and competitive intelligence.

Report Coverage

Historical data from 2021 to 2024, Base Year 2025, Forecast Years 2026-2031

Growth opportunities, challenges, supply chain outlook, regulatory framework, and trend analysis

Competitive positioning, strategies, and market share evaluation

Revenue growth and forecast assessment across segments and regions

Company profiling including strategies, products, financials, and key developments

Contents

1. EXECUTIVE SUMMARY

2. MARKET SNAPSHOT

- 2.1. Market Overview
- 2.2. Market Definition
- 2.3. Scope of the Study
- 2.4. Market Segmentation

3. BUSINESS LANDSCAPE

- 3.1. Market Drivers
- 3.2. Market Restraints
- 3.3. Market Opportunities
- 3.4. Porter's Five Forces Analysis
- 3.5. Industry Value Chain Analysis
- 3.6. Policies and Regulations
- 3.7. Strategic Recommendations

4. TECHNOLOGICAL OUTLOOK

5. UNITED STATES AI FOR PREDICTING PANDEMICS AND GLOBAL HEALTH EMERGENCIES MARKET BY COMPONENT

- 5.1. Introduction
- 5.2. Software
- 5.3. Services
- 5.4. Hardware

6. UNITED STATES AI FOR PREDICTING PANDEMICS AND GLOBAL HEALTH EMERGENCIES MARKET BY DEPLOYMENT MODE

- 6.1. Introduction
- 6.2. Cloud-based
- 6.3. On-Premises

7. UNITED STATES AI FOR PREDICTING PANDEMICS AND GLOBAL HEALTH

EMERGENCIES MARKET BY APPLICATION

- 7.1. Introduction
- 7.2. Outbreak Prediction & Detection
- 7.3. Disease Surveillance
- 7.4. Contact Tracing
- 7.5. Risk Assessment
- 7.6. Health Trend Forecasting
- 7.7. Public Health Resource Allocation
- 7.8. Others

8. UNITED STATES AI FOR PREDICTING PANDEMICS AND GLOBAL HEALTH EMERGENCIES MARKET BY END-USER

- 8.1. Introduction
- 8.2. Government & Public Health Agencies
- 8.3. Hospitals & Clinics
- 8.4. Research Institutions
- 8.5. Pharmaceuticals and Biotech Companies
- 8.6. Academic Institutions
- 8.7. Others

9. COMPETITIVE ENVIRONMENT AND ANALYSIS

- 9.1. Major Players and Strategy Analysis
- 9.2. Market Share Analysis
- 9.3. Mergers, Acquisitions, Agreements, and Collaborations
- 9.4. Competitive Dashboard

10. COMPANY PROFILES

- 10.1. BlueDot
- 10.2. Metabiota
- 10.3. Kinsa
- 10.4. Covid Act Now
- 10.5. Sempulse
- 10.6. Eviden
- 10.7. Viz.ai
- 10.8. PathAI

- 10.9. Ellipsis Health
- 10.10. Hippocratic AI

11. APPENDIX

- 11.1. Currency
- 11.2. Assumptions
- 11.3. Base and Forecast Years Timeline
- 11.4. Key benefits for the stakeholders
- 11.5. Research Methodology
- 11.6. Abbreviations
