Abstracts

The vector network analyzer market is projected to witness a compound annual growth rate of 3.93% during the forecast period to reach a total market size of US\$539.479 million by 2023, increasing from US\$428.00 million in 2017. The vector network analyzer is a type of radio frequency (RF) network analyzer generally utilized for RF design applications. This analyzer is a test framework that empowers the RF execution of radio frequency (RF) and microwave devices. The global market for vector network analyzer is being prominently driven on the account of declining popularity of scalar network analyzer. Moreover, owing to its several characteristics, it is widely utilized in automotive, electronic manufacture and communication sectors and expansion of these sectors will always drive the vector network analyzer market. The growing demand for 3G and 4G and sophisticated technological enhancements will also drive the global growth. However, reduction in prices of scalar systems may cause an increased sale of scalar network analyzers, thus impacting the market growth of vector network analyzer negatively. Geographically, North America can drive the market growth of vector network analyzer on account of increased consumption of electronic devices and cars. Similarly, industrial growth and economic growth in Asia Pacific region will drive the expansion of various end-use industries such as electronic manufacturing, aerospace, and defense which will, in turn, impact the market of vector network analyzers.
