## Abstracts

The veterinary endoscopes market is projected to grow at a CAGR of 5.28% to reach US\$378.182 million by 2024, from US\$277.665 million in 2018. Veterinary endoscopes are used for the examination of the internal organs in order to gain diagnostic information evaluating the area of interest and/or obtaining the tissue for histopathologic evaluation. For therapeutic purposes, the endoscopy can be useful in foreign body removal such as stones, or in case of the placement of feeding tube in animals. The diagnosis of gastrointestinal disorders serves as one of the drivers driving the growth of the global veterinary endoscopes market in the forecast period. Also, the growing number of veterinary practitioners worldwide are driving market growth. Some of the commonly performed procedures include bronchoscopy, arthroscopy, male and female dogs urethroscopy among others.

This research study examines the current market trends related to the demand, supply, and sales, in addition to the recent developments. Major drivers, restraints, and opportunities have been covered to provide an exhaustive picture of the market. The analysis presents in-depth information regarding the development, trends, and industry policies and regulations implemented in each of the geographical regions. Further, the overall regulatory framework of the market has been exhaustively covered to offer stakeholders a better understanding of the key factors affecting the overall market environment.

Identification of key industry players in the industry and their revenue contribution to the overall business or relevant segment aligned to the study have been covered as a part of competitive intelligence done through extensive secondary research. Various studies and data published by industry associations, analyst reports, investor presentations, press releases and journals among others have been taken into consideration while

conducting the secondary research. Both bottom-up and top down approaches have been utilized to determine the market size of the overall market and key segments. The values obtained are correlated with the primary inputs of the key stakeholders in the veterinary endoscopes value chain. The last step involves complete market engineering which includes analyzing the data from different sources and existing proprietary datasets while using various data triangulation methods for market breakdown and forecasting.
