## Abstracts

The water-soluble fertilizers market is anticipated to grow at a CAGR of 5.15% during the period 2018-2024. Water-soluble fertilizers are essentially used to accelerate the growth of crops and uphold the overall health of the plants thereby enhancing productivity. The growing demand for food products owing to the ever-growing population, increasing spending power and urbanizing society in developing nations, drive the need to enhance farm productivity. As per an FAO report, feeding a world population of 9.1 billion people in 2050 would require raising overall food production by around 70% between 2005 and 2050. The high efficiency and ease of application of water-soluble fertilizers enhance its adoption for improving farm productivity. Other drivers include the growing trend of greenhouse vegetable production and the rising adoption of modern irrigational practices due to decreasing arable land.
