## Abstracts

**Please note: extra shipping charges are applied when purchasing Hard Copy License depending on the location.**

The global increase in the prevalence of cancer and the increasing recognition of the therapeutic and commercial opportunities offered by new oncology treatments have provided a major incentives for the pharmaceutical industry to pursue the development of new agents for the treatment of cancer. To tackle the ever rising global cancer burden, the cancer treatment is inclining towards the targeted drug therapy due to the numerous drawbacks associated with conventional chemotherapy. Targeted drug therapy includes targeting various signaling pathways associated to the tyrosine kinase receptors. Ample of studies have been performed which confirm their intrinsic involvement of tyrosine related pathways in development of the tumors.

Until the late 1980s, it was thought of as impossible to target protein kinases by the tractable drugs, the reason lied in the presumed need to compete with adenosine triphosphate (ATP) as well as concerns regarding selectivity of the potential drugs. Since then, considerable progress has been made, and the past few years have seen a number of kinase inhibitors which have entered the market. Till now, 518 protein kinases have been encoded from the human genome; we call it as Human Kinome. From the encoded human genome, 90 kinases belong to the group of tyrosine kinases. The tyrosine kinase group consists of approximately 30 families, for example the VEGFR family and the fibroblast growth factor receptor (FGFR) family. Six other groups have been identified whose kinases primarily phosphorylate serine and threonine residues.

Tyrosine kinases play the most critical part in the modulation of growth factor signaling. Activated forms of these enzymes can cause increases in tumor cell proliferation and

growth, induce antiapoptotic effects, and promote angiogenesis and metastasis. In addition to activation by growth factors, protein kinase activation by somatic mutation is a common mechanism of tumor genesis. Because all of these effects are initiated by receptor tyrosine kinase activation, they are key targets for inhibitors.

The TKI drug discovery has evolved dramatically in recent years. Along with the launch of new drugs, efficient approaches for the development of potent and selective inhibitors with desirable properties have become established. At present kinase inhibitors are being designed from crystallography to deal with different binding modes and unexpected inhibitor induced conformational rearrangements. Much of kinase inhibitors which are supposed to enter in market in near future are rationally designed through high throughput screening and empirical optimization on the basis of structure–activity relationships. Sophisticated proteomic approaches have been developed in conjunction with panels of enzyme assays to allow for a more thorough annotation of kinase inhibitor selectivity.

Now with the considerable amount of research and advancement in technology, kinase signaling pathway is seen as the largest class of potential drug targets by the pharmaceutical industry. Over the last decades, billions have been spent and huge efforts have been taken in basic and clinical cancer research. About a decade ago, the race between drugs and cancer cells reached a new level by introduction of tyrosine kinase inhibitors into pharmacological anti-cancer therapy.

Clinical pipeline of cancer tyrosine kinase inhibitor therapeutics is quite strong due to which competitive product is expected to enter continuously in global market. Owing to increasing cancer incidences, it has become imperative to take necessary steps to introduce innovative tyrosine kinase inhibitor therapeutics in global market.

Technological advancements may allow the investigators to develop products having high safety and efficacy levels along with minimized side effects but it will take some time. Various products are at different stages of clinical trials which will be introduced in global market in coming years. Higher cost effectiveness is expected due to which sales is expected to increase and profit margins will increase. With all these development, the future of tyrosine kinase therapeutics looks optimistic.

“Global Cancer Tyrosine Kinase Inhibitors Market & Clinical Pipeline Outlook 2020”  
Report Highlights:

### Introduction to Cancer Tyrosine Kinase Inhibitors

Signaling Pathway of Receptor Tyrosine Kinase

Advantage of Tyrosine Kinase Inhibitors for Treatment of Cancer

Applications of Tyrosine Kinase Inhibitor in Cancer Therapy

Global Tyrosine Kinase Inhibitors Market Overview

Global Cancer Tyrosine Kinase Inhibitors Clinical Pipeline by Company,  
Indication & Phase

Global Cancer Tyrosine Kinase Inhibitors Clinical Pipeline: 411 Drugs

Majority of Cancer Tyrosine Kinase Inhibitors in Preclinical Phase: 164 Drugs

Marketed Cancer Tyrosine Kinase Inhibitors: 32 Drugs

## Contents

### **1. THE JOURNEY: GENESIS TO PRESENT OF TYROSINE KINASE INHIBITORS**

### **2. TYROSINE KINASE: AN OVERVIEW**

### **3. TYROSINE KINASES INHIBITORS: PROMISING TOOLS FOR TARGETED CANCER THERAPIES**

### **4. TYPES OF TYROSINE KINASE RECEPTORS**

#### 4.1 Epidermal Growth Factor Receptor

##### 4.1.1 Types of Epidermal Growth Factor Receptor

##### 4.1.2 Epidermal Growth Factor Receptor & Ligands

##### 4.1.3 Epidermal Growth Factor Receptor & Cancers

#### 4.2 Platelet-Derived Growth Factor Receptor (PDGFR)

##### 4.2.1 Types of Platelet-Derived Growth Factor Receptor

##### 4.2.2 Platelet-Derived Growth Factor Receptor & Ligands

##### 4.2.3 Platelet-Derived Growth Factor Receptor & Cancer

#### 4.3 Insulin-Like Growth Factor 1 Receptor (IGF-1R)

##### 4.3.1 Insulin-Like Growth Factor 1 Receptor & its Ligands

##### 4.3.2 Insulin-Like Growth Factor 1 Receptor & its role in Cancer

### **5. SIGNALING PATHWAY OF RECEPTOR TYROSINE KINASE**

#### 5.1 PI3K/Akt Pathway

#### 5.2 Ras/Raf/ERK1/2 Pathway

#### 5.3 The JAK/STAT Pathway

### **6. ADVANTAGE OF TYROSINE KINASE INHIBITORS FOR TREATMENT OF CANCER**

### **7. BCR-ABL TYROSINE KINASE INHIBITORS**

#### 7.1 Imatinib

#### 7.2 Nilotinib

#### 7.3 Dasatinib

#### 7.4 Ponatinib

#### 7.5 Bosutinib

## **8. EPIDERMAL GROWTH FACTOR RECEPTOR KINASE INHIBITORS TYROSINE**

- 8.1 Gefitinib
- 8.2 Erlotinib
- 8.3 Lapatinib
- 8.4 Icotinib
- 8.5 Canertinib
- 8.6 Afatinib
- 8.7 Neratinib
- 8.8 Poziotinib

## **9. VASCULAR ENDOTHELIAL GROWTH FACTOR TYROSINE KINASE INHIBITORS**

- 9.1 Sunitinib
- 9.2 Sorafenib
- 9.3 Vandetanib
- 9.4 Pazopanib
- 9.5 Axitinib
- 9.6 Cediranib

## **10. APPLICATIONS OF TYROSINE KINASE INHIBITOR IN CANCER THERAPY**

- 10.1 Role of Tyrosine Kinase Inhibitors in the First-Line Treatment of Advanced Non-Small Cell Lung Cancer
- 10.2 Mitigation of Chronic Myeloid Leukaemia
- 10.3 Role of tyrosine Kinase Inhibitors in Combating Colorectal Cancer
- 10.4 Gastrointestinal Cancer & Tyrosine Kinase Inhibitor
- 10.5 Tyrosine Kinase Inhibitor in Breast Cancer

## **11. GLOBAL TYROSINE KINASE INHIBITORS MARKET OVERVIEW**

- 11.1 Current Market Scenario
- 11.2 Cancer Tyrosine Kinase Inhibitors Pipeline Overview

## **12. GLOBAL TYROSINE KINASE INHIBITOR MARKET DYNAMICS**

- 12.1 Favorable Driving Factors
  - 12.1.1 Research & Development

- 12.1.2 Strong Clinical Pipeline
- 12.1.3 Increasing Disease Incidences
- 12.1.4 Unmet Requirement of Completely Curative Agents
- 12.1.5 Advancement in Manufacturing Capabilities of the Biopharmaceutical

#### Companies

#### 12.2 Challenges Countered by Tyrosine Kinase Inhibitor Market

- 12.2.1 Strict Regulatory Guidelines for Approval of Prospective Drug
- 12.2.2 Long Phase of Research & Development
- 12.2.3 Funding of Clinical Trials
- 12.2.4 Highly Competitive Market

### **13. GLOBAL TYROSINE KINASE INHIBITOR MARKET FUTURE PROSPECTS**

### **14. GLOBAL CANCER TYROSINE KINASE INHIBITORS CLINICAL PIPELINE BY COMPANY, INDICATION & PHASE**

- 14.1 Unknown
- 14.2 Research
- 14.3 Preclinical
- 14.4 Clinical
- 14.5 Phase-I
- 14.6 Phase-I/II
- 14.7 Phase-II
- 14.8 Phase-II/III
- 14.9 Phase-III
- 14.10 Preregistration
- 14.11 Registered

#### 15. Marketed Cancer Tyrosine Kinase Inhibitors Clinical Insight by Brand Name, Company & Indication

##### 15.1 Blood Cancer

- 15.1.1 Ibrutinib (Imbruvica)
- 15.1.2 Ponatinib (Iclusig)
- 15.1.3 Dasatinib (Tasigna)
- 15.1.4 Nilotinib (Tasigna)
- 15.1.5 Bosutinib (Bosulif)
- 15.1.6 Radotinib (Supect)

##### 15.2 Breast Cancer

- 15.2.1 Trastuzumab Subcutaneous (Herceptin SC)
- 15.2.2 Pertuzumab (Omnitarg & Perjeta)

- 15.2.3 Lapatinib (Tykerb & Tyverb)
- 15.2.4 Trastuzumab Biosimilar (CANMAb & Hertraz)
- 15.2.5 Trastuzumab Biosimilar (Vivitra)
- 15.3 Gastric Cancer
  - 15.3.1 Apatinib
- 15.4 Non-small cell lung cancer
  - 15.4.1 Afatinib (Gilotrif, Giotrif & Tomtovok)
  - 15.4.2 Nintedanib (Ofev & Vargatef)
  - 15.4.3 Ceritinib (Zykadia)
  - 15.4.4 Crizotinib (Xalkori)
  - 15.4.5 Icotinib (Conmana)
  - 15.4.6 Gefitinib (Iressa)
  - 15.4.7 Alectinib (Alecensa)
- 15.5 Renal Cancer
  - 15.5.1 Axitinib (Inlyta)
- 15.6 Thyroid Cancer
  - 15.6.1 Vandetanib (Caprelsa, Zactima & Zictifa)
- 15.7 Multiple
  - 15.7.1 Sunitinib (Sutent)
  - 15.7.2 Lenvatinib (Lenvima)
  - 15.7.3 Regorafenib (Stivarga)
  - 15.7.4 Imatinib (Gleevec, Glivec & Ruvisa)
  - 15.7.5 Trastuzumab (Herceptin)
  - 15.7.6 Erlotinib (Tarceva)
  - 15.7.7 Ramucirumab (Cyramza)
  - 15.7.8 Cabozantinib (COMETRIQ, Cabometyx & Cometriq)
  - 15.7.9 Nimotuzumab (BIOMAb EGFR, CIMAher, Cimaher, Taixinsheng, TheraCIM, Theraloc & VECTHIX)
  - 15.7.10 Sorafenib (Nexavar)
  - 15.7.11 Imatinib (Imatib)

## **16. DISCONTINUED & SUSPENDED CANCER TYROSINE KINASE INHIBITORS CLINICAL PIPELINE BY COMPANY & PHASE**

- 16.1 No Development Reported
- 16.2 Discontinued
- 16.3 Suspended

## **17. COMPETITIVE LANDSCAPE**

- 17.1 AB Science
- 17.2 Advenchen Laboratories
- 17.3 Array BioPharma
- 17.4 ARIAD Pharmaceuticals
- 17.5 Astellas Pharma (OSI Pharmaceuticals)
- 17.6 AstraZeneca
- 17.7 Bayer HealthCare
- 17.8 Biocad
- 17.9 Biocon
- 17.10 Boehringer Ingelheim
- 17.11 Bristol-Myers Squibb
- 17.12 Celera Genomics Group
- 17.13 Celgene Corporation (Avila Therapeutics)
- 17.14 Celltrion
- 17.15 Chugai Pharmaceutical
- 17.16 Cytopia Research
- 17.17 Daiichi Sankyo (Ambit Biosciences Corporation)
- 17.18 Dyax
- 17.19 Eisai Co Ltd
- 17.20 Exelixis
- 17.21 GlaxoSmithKline
- 17.22 Hanmi Pharmaceutical
- 17.23 Novartis
- 17.24 Onyx Pharmaceuticals
- 17.25 Pfizer
- 17.26 Plexxikon
- 17.27 Reliance Life Sciences
- 17.28 Roche
- 17.29 Shire
- 17.30 Synthron
- 17.31 Wyeth
- 17.32 Xcovery
- 17.33 Zydus Cadila

- Table 8-1: List of the Drugs Targeting EGFR Receptor
- Table 9-1: Different Drugs associated with The Treatment of Angiogenesis Related Cancers
- Table 10-1: Tyrosine Kinase Inhibitors Targeting Lung Cancer
- Table 10-2: Drugs being Developed to Treat Hematological Malignancies
- Table 10-3: Drugs Used to Manage Breast Cancer
- Table 10-4: Some of the Tyrosine Kinase Inhibitors Developed to Treat Metastatic Melanoma
- Table 11-1: Drugs to Enter the Market in Near Future

### COMPANIES MENTIONED

AB Science  
Advenchen Laboratories  
Array BioPharma  
ARIAD Pharmaceuticals  
Astellas Pharma (OSI Pharmaceuticals)  
AstraZeneca  
Bayer HealthCare  
Biocad  
Biocon  
Boehringer Ingelheim  
Bristol-Myers Squibb  
Celera Genomics Group  
Celgene Corporation (Avila Therapeutics)  
Celltrion  
Chugai Pharmaceutical  
Cytopia Research  
Daiichi Sankyo (Ambit Biosciences Corporation)

Dyax  
Eisai Co Ltd  
Exelixis  
GlaxoSmithKline  
Hanmi Pharmaceutical  
Novartis  
Onyx Pharmaceuticals  
Pfizer  
Plexxikon  
Reliance Life Sciences  
Roche  
Shire  
Synthon  
Wyeth  
Xcovery  
Zydus Cadila

## I would like to order

Product name: Global Cancer Tyrosine Kinase Inhibitors Market & Clinical Pipeline Outlook 2020

Product link: <https://marketpublishers.com/r/G1AB44FFBB9EN.html>

Price: US\$ 3,000.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:

[info@marketpublishers.com](mailto:info@marketpublishers.com)

## Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page <https://marketpublishers.com/r/G1AB44FFBB9EN.html>
