Abstracts

B-Cell Maturation Antigen (BCMA): hot target for emerging treatment modalities

The highly restricted expression of B-cell maturation antigen (BCMA) to plasma cells and its role in the survival and growth for multiple myeloma cells makes BCMA a good potential target for enhanced immunotherapeutic strategies. This report describes and analyzes the

Scientific rationale for BCMA-targeted therapies;

Preclinical proof-of-concept of BCMA blockade;

Clinical experience with BCMA-targeted therapies;

The competitive landscape of BCMA-targeted treatment modalities;

Profiles of anti-BCMA CAR T-cells, antibody-drug conjugate and T-cell redirecting bispecific antibodies;

Profiles of companies involved in development of anti-BCMA therapy candidates.

Especially activity-enhanced antibodies and cells such as antibody-drug conjugates (ADCs) and T-cell redirecting bispecific antibodies as well as chimeric antigen receptor (CAR) T-cells, respectively, will benefit from the high target selectivity of BCMA to avoid on-target, off-tumor toxicity. As a consequence, novel cellular and humoral BCMA-

targeted treatment modalities have emerged and resulting product candidates entered first-in-human clinical evaluation. Further development candidates are undergoing IND-enabling studies.

Contents

1 Target Background

2 Target Antigen Expression Profile

3 Preclinical Proof-of-Concept

4 Clinical Indications & Treatment Options

5 Clinical Experience with BCMA-Targeted Treatment Modalities

6 Treatment Modalities & Competitive Landscape

7 Drug & Cell Therapy Candidate Profiles

7.1 CAR T-Cells

7.2 Antibody-Drug Conjugate (ADC)

7.3 T-Cell Redirecting Antibodies

8 Company Profiles

9 References

I would like to order

Product name: B-Cell Maturation Antigen (BCMA): hot target for emerging treatment modalities

Product link: <https://marketpublishers.com/r/BD0B79B0236EN.html>

Price: US\$ 570.00 (Single User License / Electronic Delivery)
