Competitor Analysis: RORgamma Antagonists and Agonists

This Competitive Intelligence report about RORgamma Antagonists and Agonists evaluates the landscape of investigational small molecules targeting the Retinoic Acid-Related Orphan Receptor gamma (ROR γ) for treatment of inflammatory diseases and cancer as of September 2019.

The transcription factor ROR γ plays a critical role in the expression of pro-inflammatory cytokine interleukin IL-17 and is therefore an attractive target for the treatment of inflammatory diseases. Interest in this molecular target has been heightened by the advancement of orally and topically administered ROR γ modulators into clinical trials.

Some studies found ROR γ to be upregulated in cancer tissues compared with normal tissues. Furthermore, synthetic ROR γ agonists modulate immune cell gene expression to increase effector T-cell activity and decrease immune suppression.

The report includes a compilation of currently active projects in research and development of RORgamma antagonists and agonists for treatment of inflammatory diseases and cancer, respectively. In addition, the report lists company-specific R&D pipelines of antagonists and agonists of RORgamma. Competitor projects are listed in a tabular format providing information on:

Drug Codes,

Target/Mechanism of Action,

Class of Compound,

Company,

Product Category,

Indication,

R&D Stage and

additional comments with a hyperlink leading to the source of information.

About Competitor Analysis Series:

The Competitor Analysis Series delivers NO-FRILLS, but concise information about the pipeline of R&D projects for targets, diseases, technologies and companies. The information is provided in a tabular format and fully referenced.

Contents

1) RORGAMMA ANTAGONISTS/INVERSE AGONISTS FOR INFLAMMATORY DISEASES

2) RORGAMMA AGONISTS FOR CANCER

3) CORPORATE RORGAMMA ANTAGONIST & AGONIST R&D PIPELINES
