Product description

Subscription to La Merie's proprietary Oncology Pipeline Database provides online access to more than 3,000 project entries in oncology. Each project is specified for its Target or Mechanism of Action, Product Category and R&D Phase. Use of the R&D database of cancer drugs is intuitive. Data sets of interest can be printed and exported. Projects are being updated continuously. The R&D history of each project with online references of information sources can be viewed and printed. Sales figures of major products are provided. The projects can be segmented into Territories, Product Categories and R&D Phases. An advanced search function allows to combine search parameters. A scroll down menu for predefined targets conveniently selects projects of interest. By clicking on column heads of the project list, projects can be arranged in ascending or descending alphabetical or numerical order, e.g. for phase, product category or company name. Sample screenshots illustrate the database.

Purchase of the subscription provides a 6-month online access to the data of the Oncology Database. Credentials to access the database will be sent by e-mail within 24 hours after purchase.

Benefits from the Oncology Pipeline Database:

New database with no historical burden

Intuitive use

Designed for structured searches

Focused on targets, product categories and R&D phases

Ideal for competitor analysis (companies, targets, product categories)

Cost-effective and rapid solution for benchmarking

Identification of licensing candidates
