## Abstracts

Report Package: Immunotherapeutics Targeting MAGE-A, NY-ESO-1, hTERT, WT1, PRAME and Survivin

Intracellular cancer targets are estimated to be 3-4 times more frequent than surface protein targets. However, these intracellular cancer targets are not accessible to traditional monoclonal antibody or chimeric antigen receptor (CAR) T-cell therapy. The six reports of this package are covering immunotherapeutics against six important intracellular cancer targets:

Melanoma-associated antigen A: MAGE-A

New York esophageal squamous cell carcinoma-1: NY-ESO-1

Human telomerase reverse transcriptase: hTERT

Wilms' tumor 1: WT1

Preferentially expressed antigen in melanoma: PRAME

Survivin

This report package includes six Competitor Analysis reports covering immunotherapeutics directed to six different important cancer targets. The original reports were published in May and June 2018, respectively:

[Competitor Analysis: MAGE-A-Targeted Immunotherapy](#)

[Competitor Analysis: NY-ESO-1-Targeted Immunotherapy](#)

[Competitor Analysis: hTERT-Targeted Immunotherapy](#)

[Competitor Analysis: WT1-Targeted Immunotherapy](#)

[Competitor Analysis: PRAME-Targeted Immunotherapy](#)

[Competitor Analysis: Survivin-Targeted Immunotherapy](#)

Detailed report descriptions and tables of contents from the reports can be found on the respective product page. The reports can be acquired separately or as a package with a 40% discount on list prices.
