## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In liquid chromatography, the syringe functions primarily as a pipette or liquid-transfer device that loads a sample loop. The same largely holds true for gas chromatography. The syringe generally does not take an active role in injection, which occurs only after the sample has been displaced from the syringe. Syringes are gas-tight and leak-proof. Chromatography Syringes are widely used in Pharmaceutical Companies, Research Institutes and Others Institutes. The most proportion of Chromatography Syringes is Research Institutes, and the consumption proportion is about 47%. Market competition is intense. Hamilton Company, SGE, Thermo Scientific, Ace Glass are the leaders of the industry. There are also some Chromatography Syringes make by Chromatography maker and other company but there market share is small. Over the next five years, LPI(LP Information) projects that Chromatography Syringes will register a 2.1% CAGR in terms of revenue, reach US\$ 41 million by 2023, from US\$ 36 million in 2017.
