A food dehydrator refers to a device that removes moisture from food to aid in its preservation. A food dehydrator uses a heat source and air flow to reduce the water content of foods. The water content of food is usually very high, typically 80% to 95% for various fruits and vegetables and 50% to 75% for various meats. Removing moisture from food restrains various bacteria from growing and spoiling food. Further, removing moisture from food dramatically reduces the weight of the food. Thus, food dehydrators are used to preserve and extend the shelf life of various foods.

With the improvement of national economy, the food dehydrators industry has rapidly developed and it now plays an important part in people's life. Production market and manufacturers are expanding, food dehydrators are seizing the market with increasing brand and marketing effect.

The food dehydrators market concentration is relatively low; there are a lot more small manufacturers around the world, and high-end products are mainly from USA.

Excalibur, Presto and Nesco took the top three sales volume share spots in the food dehydrators market in 2015 and 2016.

With more and more intense industry competition, price of food dehydrators was slightly decreased in the past few years.

Over the next five years, LPI(LP Information) projects that Food Dehydrators will register a 6.4% CAGR in terms of revenue, reach US\$ 280 million by 2023, from US\$ 190 million in 2017.
