## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Mobile crusher and screener machine is designed to crush large rocks into small rocks, gravel or dust. A crusher holds material which is to be crushed between two parallel solid surfaces. Sufficient force is applied to the material by crusher that generates enough energy to crush material by fracturing or deform the material. Screening is the process of taking granular ore material and separating it into multi-grades by size. Various types of screeners are used for the screening process. Both crusher and screens are used in the mining industry to crush the rock and then separate those using screeners.

The consumption volume of mobile crusher and screener is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of mobile crusher and screener industry may not keep that fast. But it is surely forecasted that the market of mobile crusher and screener is still promising.

The product average price declined in the past few years due to the technology development, the average price will keep the trend in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

Over the next five years, LPI(LP Information) projects that Mobile Crushers and

Screeners will register a 2.4% CAGR in terms of revenue, reach US\$ 2200 million by 2023, from US\$ 1910 million in 2017.
