## **Abstracts**

The report requires updating with new data and is sent in 48 hours after order is placed.

This report we mainly researched wet pet food, Wet or canned pet food is significantly higher in moisture than dry or semi-moist food. Canned food is commercially sterile (cooked during canning); other wet foods may not be sterile. A given wet food will often be higher in protein or fat compared to a similar kibble on a dry matter basis (a measure which ignores moisture); given the canned food's high moisture content, however, a larger amount of canned food must be fed. Grain gluten and other protein gels may be used in wet pet food to create artificial meaty chunks, which look like real meat.
