Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global 1-Nonene market for 2018-2023.

1-Nonene, also known as propylene trimer, is a branched olefin produced by the polymerisation of propylene. It is an alkene with the molecular formula C₉H₁₈. 1-Nonene is a clear, flammable liquid.

1. 1-Nonene is a branched olefin produced by the chemical linking (oligomerization) of propylene and is also commonly referred to as propylene trimer. It is mainly used to produce isodecyl alcohol, neodecanoic acid, nonylphenol and isononyl mercaptan which are used to produce plasticizers, surfactants, coating components, paint driers, and polymerization modifiers and so on. Exxon Mobil, Shell, Braskem and so on are the major players of 1-nonene for the time being.

China still depends on imported 1-nonene to meet its demand. In addition, unlike applications of foreign countries, China mainly uses 1-nonene to produce nonylphenol instead of isodecyl alcohol for the time being. Chinese demand of 1-nonen is estimated to be 34826 MT in 2015

1-Nonene production mainly concentrates in North American and European regions currently. Although investors are interested in the product, due to technology barriers and other issues, it is difficult for new entrants to be engaged in the industry. There are mainly two companies in China producing 1-nonen for the time being while the product performance has an obvious gap with imported ones.

Over the next five years, LPI(LP Information) projects that 1-Nonene will register a 5.8% CAGR in terms of revenue, reach US\$ 2020 million by 2023, from US\$ 1440 million in 2017.
