## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global 10-Deacetylbaecatin III market for 2018-2023.

This report studies the 10-Deacetylbaecatin III market. 10-Deacetylbaecatin III, also known as 10-DAB or 10-DAB III, is a closely related natural organic compounds isolated from dried needles and small branches of the European yew tree (*Taxus baccata*). 10-Deacetylbaecatin III is a precursor to the anti-cancer drug docetaxel (Taxotere). paclitaxel (taxol); cabazitaxel. 10-10-deacetylbaecatin III was found to selectively inhibit the growth of *L. DONOVANI* intracellular amastigotes within J774 murine macrophages in vitro at nanomolar concentrations with an IC(50) value of 70 nM.

As new companies enter the market for finished paclitaxel, bulk demand will increase as competition forces down prices, the study notes, adding that, with the drug becoming more affordable, physicians are expected to prescribe it more freely. However, while demand may be rising, paclitaxel is derived from a natural resource, and its long-term availability is in question.

Yew trees are slow-growing, and the extraction process requires numerous trees to supply an adequate amount, it says. The possible scarcity of the product is spurring sales, especially to the research sector where large stocks are necessary for proper experimentation. However, the report notes that enterprising companies have found ways to circumvent this issue and increase supply.

With advances in technology, new and better ways of extracting paclitaxel have evolved, with plant cell culture techniques and genetic engineering also emerging as fruitful methods of enhancing production says F&S. These methods have resulted in

ample and continuous supplies, which is expected to boost the quantities of bulk paclitaxel, and subsequently augment the revenues generated by finished products, the report adds.

Over the next five years, LPI(LP Information) projects that 10-Deacetylbaaccatin III will register a 4.3% CAGR in terms of revenue, reach US\$ 74 million by 2023, from US\$ 58 million in 2017.
