Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global 1,2,4-Trimethylbenzene market for 2018-2023.

1,2,4-Trimethylbenzene, a flammable colorless liquid with a strong odor, occurs naturally in coal tar and petroleum. It is a major component (typically 40%) of a petroleum refinery distillation fraction known as the C9 aromatic fraction (or simply the C9 fraction).

Trimellitic anhydride is the largest application of 1,2,4-trimethylbenzene, others applications include mesitylene and so on. With increasing demand from downstream industry, 1,2,4-trimethylbenzene production shows continuous upward trend in the recent few years. FHR, Eni, Jiangsu Zhengdan, Nanjing Refinery and so on are among of key players in 1,2,4-trimethylbenzene industry at the moment.

Compared with foreign giants, 1,2,4-trimethylbenzene produced by Chinese manufacturers still has a certain performance gap. Chinese 1,2,4-trimethylbenzene manufacturers should be dedicated to improving their technology and narrowing down the performance gap with foreign giants. Besides, stimulated by downstream demand, 1,2,4-trimethylbenzene production in China will be released further in the coming years as some companies have add investments on their 1,2,4-trimethylbenzene businesses.

We tend to believe that this industry still has a bright future, considering the current demand. As for product prices, the slow downward trend in recent years will continue in

the next few years, since competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that 1,2,4-Trimethylbenzene will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
