In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global 1,4-Dichlorobenzene market for 2018-2023. 1,4-Dichlorobenzene (p-DCB, para-dichlorobenzene) is an organic compound with the formula C₆H₄Cl₂. This colorless solid has a strong odor. In terms of its structure, the molecule consists of two chlorine atoms substituted for hydrogen at opposing sites on a benzene ring. The p-DCB is used as a pesticide and a deodorant, most familiarly in mothballs in which it is a replacement for the more traditional naphthalene. p-DCB is also used as a precursor in the production of the polymer poly(p-phenylene sulfide). At present, the major manufacturer of PDCB is located in China and most of them are in Jiangsu and Shandong areas. And China has been the biggest export PDCB country in the world.

PDCB is primarily used in mothballs and similar products to protect clothing from moths. Uses for individual PDCB products vary widely. Always read and follow the label when applying pesticide products. PDCB is also used in deodorant blocks for rest room toilets and trash containers. However the carcinogenicity of PDCB has caused the concern of public.

The PPS market increased greatly at the speed of nearly 8% annually in recent years. The production of PPS will consume great amount of PDCB in the future.

Over the next five years, LPI(LP Information) projects that 1,4-Dichlorobenzene will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
