Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global 2-shot Injection Molding market for 2018-2023.

Two-shot, also referred to as dual-shot, double-shot, multi-shot and overmolding, is a plastic molding process in which two different plastic resins are molded together in a single machining cycle.

There are two phases of the two-shot molding process. The first is similar to traditional injection molding: A shot of resin is injected into a mold and cooled to form a solid part. In the second phase, the just-molded part is transferred to a second mold via a rotating platen or a robotic arm, and receives the second shot of resin – in, through or around certain parts of the first molded part, depending on the design. The two plastic resins then form a molecular bond and the multi-resin molded part is cooled and ejected.

The global market is highly fragmented with leading players holding small shares in the overall market dynamics.

Over the next five years, LPI(LP Information) projects that 2-shot Injection Molding will register a 6.3% CAGR in terms of revenue, reach US\$ 10800 million by 2023, from US\$ 7520 million in 2017.
