In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global 3D Dental Scanners market for 2018-2023. 3D dental scanner is a device that identifies, analyzes, collects and draws/displays shapes or three-dimensional models of dental or solid objects. A 3D dental scanner enables the capture of geometric shapes and the recreation of the physical appearance of tangible objects, allowing them to be built and displayed on a computer device. According to the report, one of the major drivers for this market is Increasing affordability among people. The rapidly dropping prices of dental scanners as well as increasing availability of low-cost quality dental scanners is enabling dentists to adopt these products at a faster rate. Also, the added benefit of decreasing time consumption for one patient's diagnosis and treatment, broadens their spectrum of reach to more patients, thus increasing their profit. The companies are continuously focusing on developing affordable dental scanners. For instance, Dental Wings is using a biocompatible finish for the wand that helps to reduce the manufacturing cost.

Over the next five years, LPI(LP Information) projects that 3D Dental Scanners will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of 3D Dental Scanners market by product type, application, key manufacturers and key regions.
