In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global 3D Printers market for 2018-2023.

3D printers are devices that are any of various processes in which material is joined or solidified under computer control to create a three-dimensional object,[1] with material being added together (such as liquid molecules or powder grains being fused together). 3D printing is used in both rapid prototyping and additive manufacturing (AM). Objects can be of almost any shape or geometry and typically are produced using digital model data from a 3D model or another electronic data source

The industry is being constantly driven by technological developments, which promise higher flexibility and enable faster design. Further, manufacturers have realized the advantages that 3D printing offers, such as optimizing material, labor, and transportation costs. Manufacturing units have been able to cut down on material wastage through the use of 3D printing.

Over the next five years, LPI(LP Information) projects that 3D Printers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
