In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Abrasive Paper market for 2018-2023.

Sand paper or abrasive paper is generic names used for a type of coated abrasive that consists of sheets of paper with abrasive material glued to one face. Despite the use of the names neither sand nor glass are now used in the manufacture of these products as they have been replaced by other abrasives. Sand Paper is produced in different grit sizes and is used to remove small amounts of material from surfaces, either to make them smoother (for example, in painting and wood finishing), to remove a layer of material (such as old paint), or sometimes to make the surface rougher (for example, as a preparation for gluing).

At present, the global market is dominated by Europe and China. China is the world's largest production area. In 2016, China hold 30.19% of the global share of production. However, China's products prices are relatively low. At the same time, China's products are relatively low-end. High-end products are mainly occupied by manufacturers in Europe and the United States. At present, China is the world's major exporting countries. Southeast Asia and India import Chinese products. Europe is the world's second largest production area.

Over the next five years, LPI(LP Information) projects that Abrasive Paper will register a 4.3% CAGR in terms of revenue, reach US\$ 2640 million by 2023, from US\$ 2050 million in 2017.
