In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global AC Current Transformers (CT) for Electrical Meters market for 2018-2023.

An AC current transformer (CT) is a transformer that is used to produce an alternating current (AC) in its secondary which is proportional to the AC current in its primary. Current transformers, together with voltage transformers (VTs) or potential transformers (PTs), which are designed for measurement, are known as instrument transformers. The Current Transformer (C.T.), is a type of “instrument transformer” that is designed to produce an alternating current in its secondary winding which is proportional to the current being measured in its primary.

Although China have the largest Capacity in the world, but China concentrate on low-end products, so Europe got the highest revenue.
