Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Acoustic Camera market for 2018-2023.

An acoustic camera is an imaging device used to locate sound sources and to characterize them. It consists of a group of microphones — also called microphone array — that are simultaneously acquired to form a representation of the location of the sound sources. With this method the sound signal is shown and also a sequence of acoustic images can be acquired as acoustic videos are generated at same time.

The Acoustic Camera was the first commercially viable system using beamforming to visually localize acoustic emissions. Brought to the market in 2001 as a pioneering technique, the Acoustic Camera has over the years become a metaphor for beamforming systems in general. The tool is now used in a variety of industries and has a growing customer base worldwide.

The advantage of the Acoustic Camera: it is a lightweight, modular, and therefore flexible system which is rapidly set up and ready to use. The benefits of the Acoustic Camera are straightforward: noise sources are visualized, quality problems are detected, and development times are reduced. The fields of application are as diverse as the world of sound and range from measurements in the open field & acoustic labs to the use in automation engineering.

The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, the slow downward price trend in recent years will maintain. As competition intensifies, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Acoustic Camera will register a 13.2% CAGR in terms of revenue, reach US\$ 250 million by 2023, from US\$ 120 million in 2017.
