In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Acrylate Monomer market for 2018-2023.

Acrylate monomers are esters which contain vinyl groups, that is, two carbon atoms double-bonded to each other, directly attached to the carbonyl carbon.

Acrylate monomers are key components in the formulation of coatings, inks, and adhesives. They react fast, which is very important in rapid cure technologies like UV/EB curing.

In consumption market, the growth rate of United States consumption is smooth relatively. Germany is still the mainly consumption regions due to the advanced production technology and rapid development of economy.

Methyl acrylate, ethyl acrylate, butyl acrylate and 2-ethylhexyl acrylate are the major types of acrylate monomer. They can be widely used in many industries. Currently the application of acrylate monomer mainly focus on plastics, textiles, coatings and adhesive, Among them, the largest proportion is the coatings industry, according to our statistics, in 2015, in the whole downstream market butyl acrylate, the coating consumption accounted for 44.45%. With the development of economy, these industries will need more Acrylate Monomer. So, Acrylate Monomer has a huge market potential in the future.

Over the next five years, LPI(LP Information) projects that Acrylate Monomer will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
