Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Acrylate Monomers market for 2018-2023. Acrylate monomers used to form acrylate polymers are based on the structure of acrylic acid, which consists of a vinyl group and a carboxylic acid ester terminus or a nitrile. Other typical acrylate monomers are derivatives of acrylic acid, such as methyl methacrylate in which one vinyl hydrogen and the carboxylic acid hydrogen are both replaced by methyl groups, and acrylonitrile in which the carboxylic acid group is replaced by the related nitrile group.

Asia Pacific accounts for a major share in the global acrylate monomers market driven by the robust expansion of leading end-user industries, such as construction and infrastructure industry, automotive industry, and textile industry. North America held a significant share of the acrylate monomer market. Rising demand from the paints and coating industry in North America is estimated to drive the market in the region during the forecast period

Over the next five years, LPI(LP Information) projects that Acrylate Monomers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
