## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Acrylic Acid Derivatives market for 2018-2023. Acrylic acid derivatives are important raw materials for the manufacture of a wide variety of industrial and consumer products. In the theme of sustainability, more economical methods that utilize cheaper and less toxic feedstock are urgently needed. Clean pathways can be realized through the direct functionalization of CO<sub>2</sub>, which plays a dual role of reducing the CO<sub>2</sub> emission rate and producing chemicals with added value. Because ethylene is one of the most abundant industrial feedstocks, manufacturing acrylic acid and acrylates directly from CO<sub>2</sub> and ethylene becomes both scientifically fascinating and industrially relevant. As a dream reaction in catalysis and CO<sub>2</sub> utilization, this challenging transformation has drawn close attention for nearly 40 years. With continuous efforts from both academia and industry, scientists are getting close to realizing an effective catalytic system. This review covers critical discoveries and discusses possible future directions in this area.

The report segments the market by derivative (acrylic esters- methyl, ethyl, butyl, 2-ethylhexyl acrylate, polymers—acrylic elastomers, superabsorbent polymers, WTP), and application (surface coatings, adhesives & sealants, textile, detergents, plastic additives, diapers & training pants, adult incontinence, water treatment, and others),

Over the next five years, LPI(LP Information) projects that Acrylic Acid Derivatives will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
