## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Acrylonitrile-Butadiene Rubber (NBR) market for 2018-2023.

Acrylonitrile butadiene rubber, or nitrile rubber (NBR), is synthetic rubber copolymer produced by the polymerisation of acrylonitrile (ACN) and butadiene (BD). An important property of nitrile rubber is its resistance to aliphatic hydrocarbon oils and fuels as well as some chemicals. Increasing the content of acrylonitrile in the nitrile rubber improves its resistance to oil but reduces its low temperature flexibility.

Nitrile rubber is also noted for its high resilience and resistance to abrasion, water, alcohols and heat. However, it only has moderate strength and is less resistant to ozone, aromatic hydrocarbons and strong oxidants.

The properties of nitrile rubber make it suitable for use in automotive and industrial applications. For example, it is used in hoses, O rings, gaskets, oil seals, transmission belts as well as footwear, gloves, adhesives and sealants.

Over the next five years, LPI(LP Information) projects that Acrylonitrile-Butadiene Rubber (NBR) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
