In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Activated Carbon Fiber (ACF) market for 2018-2023.

Activated carbon fiber is a type of carbonated fiber that is made of cellulosic, PAN, phenolic, and pitch fibers, and it is new type advanced material which is different from granular or powder activated carbon.

Japan is the largest market of the activated carbon fiber (ACF), while it took up about 70% of the global total market, followed by the China, about 23%; and Taiwan took about 4% of the global total in 2016. There is still some growth in the developing countries, and the China market will keep increasing in the next five year, too.

Despite the presence of competition problems, the global recovery trend is clear, activated carbon fiber (ACF) retains its advantage in many areas, investors are still optimistic about this area; the future will still have more new investment enter the field. Although sales of activated carbon fiber (ACF) brought some opportunity, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the activated carbon fiber (ACF) field.

Over the next five years, LPI(LP Information) projects that Activated Carbon Fiber (ACF) will register a 2.3% CAGR in terms of revenue, reach US\$ 340 million by 2023, from US\$ 300 million in 2017.
