Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Advanced Automotive Materials market for 2018-2023.

Advanced materials for automotive manufacturing are helping automakers build lighter, more fuel-efficient vehicles. With the lighter and stronger steel, aluminum, and magnesium components, the current crop of cars and trucks can meet stringent crash safety standards, while also improving fuel economy to help achieve the more strict government Corporate Average Fuel Economy (CAFE) mileage requirements looming on the horizon.

The usage of the advanced automotive materials market is to minimize the weight of the vehicle. Reducing the overall weight of the vehicle can help increasing the fuel efficiency and thereby limiting the carbon emissions in the environment.

Advanced high-strength steels (AHSS) are becoming much more widely deployed by automakers for structural parts where thinner, stronger metals not only help save weight, but also offer substantially improved crash protection.

Over the next five years, LPI(LP Information) projects that Advanced Automotive Materials will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
