## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Advanced Biofuel market for 2018-2023. Advanced Biofuels are high-energy liquid transportation fuels derived from: low nutrient input/high per acre yield crops; agricultural or forestry waste; or other sustainable biomass feedstocks including algae. The advanced biofuels include biodiesel, biobutanol, biodme,cellulosic ethanol

One of the most important reasons for the shift to biofuels is that they are made from locally available feedstocks, which can be easily produced in any supportive environment. They not only reduce the dependency on petroleum-based energy sources but also benefit the agricultural sector by providing a financially beneficial avenue for their wastes.

Over the next five years, LPI(LP Information) projects that Advanced Biofuel will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
