## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Advanced Polymer Composites market for 2018-2023.

Advanced polymer composites are generally characterized or determined by unusually high strength fibres with unusually high stiffness, or modulus of elasticity characteristics, compared to other materials, while bound together by weaker matrices. These are termed Advanced polymer composites in comparison to the composite materials commonly in use such as reinforced concrete, or even concrete itself. The high strength fibers are also low density while occupying a large fraction of the volume. Glass fibers are prognosticated to account as a major product segment of the world advanced polymer composites market. These fibers are excessively used in a wide range of applications such as wind turbine, aerospace, and automotive. They could also account for a larger share in the global production of advanced polymer composites.

Over the next five years, LPI(LP Information) projects that Advanced Polymer Composites will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
