Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aeronautic Propeller market for 2018-2023. Aeronautic Propeller converts rotary motion from an engine or other power source, into a swirling slipstream which pushes the propeller forwards or backwards.

There is a huge demand for the aeronautic propeller market in the developing countries because of the increasing demand of the aircraft in these regions.

Propellers are only suitable for use at subsonic airspeeds up to around 480 mph (770 km/h), as above this speed the blade tip speed approaches the speed of sound and local supersonic flow causes high drag, noise and propeller structural problems.

Over the next five years, LPI(LP Information) projects that Aeronautic Propeller will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Aeronautic Propeller market by product type, application, key manufacturers and key regions.

To calculate the market size, LP Information considers value and volume generated from the sales of the following segments:
