Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Aerospace Additive Manufacturing market for 2018-2023.

Additive manufacturing (AM) is a process of building three-dimensional objects based on a CAD digital model. The 'additive' process involves applying materials in successive layers as per the CAD design to manufacture an object. Unlike conventional manufacturing, which involves 'subtractive' process (e.g., cutting, drilling, milling) and forming (bending, shaping), AM requires minimal or no tooling to build the finished product.

Additive manufacturing presents the opportunity to completely, rethink a product's design, transforming its functionality and reducing manufacturing complexity. This is a disruptive technology that is transformational. Aerospace companies and government programs are focusing on the advance of metal 3D printing for aerospace engine applications in 2017. Advances have been able to make commercial additive manufacturing a reality.

Over the next five years, LPI(LP Information) projects that Aerospace Additive Manufacturing will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
