Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aerostat Systems market for 2018-2023.

An aerostat is a platform that uses a buoyant that is lighter than air gases such as helium, hydrogen, and hot air. These gases lift the tethered balloon with nearly the same overall density as air. The key structural components include a lightweight skin envelope that contains helium gas to provide buoyancy, payload, and a ground control station. Depending on the application of the aerostat systems are the different payloads attached such as electro-optics, communication intelligence, thermal imaging camera, electronic intelligence, surveillance radar, and inertial navigation system. Parts and maintenance costs are included in the unit price.

Aerostat Systems industry has developed for a century. Technologically, it's very mature. The development of LTAS (Lighter Than Air Systems) aerostats, tethered drones and mast-based ISR (intelligence, reconnaissance and surveillance) systems is a costly, complex and time-consuming process, and the investment in product development often involves a long wait until a return, if any, is achieved on such investment. It continues to make significant investments in research and development relating to aerostats, mast-based ISR systems, and tethered powered drones. Investments in new technology and processes are inherently speculative. Technical obstacles and challenges they encounter in their research and development process may result in delays in or abandonment of product commercialization, may substantially increase the costs of development, and may negatively affect their results of operations. Consumption of United States Aerostat Systems was relatively stable, they are mainly used by U.S. government and government-related entities that are subject to

appropriations by Congress and reduced funding for defense procurement and research and development programs would likely adversely impact the ability to generate revenues.

Over the next five years, LPI(LP Information) projects that Aerostat Systems will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
