## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aerostructure Equipment market for 2018-2023.

An aerostructure is a component of an aircraft's airframe. This may include all or part of the fuselage, wings, or flight control surfaces. Companies that specialize in constructing these components are referred to as 'aerostructures manufacturers,' though many larger aerospace firms with a more diversified product portfolio also build aerostructures.

Aircraft production is on the rise and the demand is fueled by a number of global factors. Despite a trend towards loading efficiency, route consolidation, and the geopolitical situation of countries such as Russia resulting in some limitations, the world GDP is up and a wealthier, growing population is leading to a higher volume of flights. In the EU especially, there is higher demand for more eco-friendly and fuel-efficient aircraft, and emerging and expanding markets are supported by large investments in China and Mexico's attractive workforce.

Over the next five years, LPI(LP Information) projects that Aerostructure Equipment will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
