In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global AES Resin market for 2018-2023.

AES resin (acrylonitrile EPDM rubber/styrene copolymer) has excellent weather resistance, even if long time exposure to ultraviolet light, moisture, rain, outdoor light and ozone conditions without coating as well as the physical stability. Especially suitable for coating used directly in the outdoor.

ABS resin has excellent formability, impact resistance and gloss properties, but due to the use of butadiene rubber in synthesis of ABS in containing a double bond structure, so easy to decomposition of ultraviolet radiation, heat and oxidation. So AES is made without a double bond structure to overcome the flaw of ABS and AES is a kind of excellent weatherability resin increasingly used in automobile, household appliances, electronics and outdoor decoration. Automobile is the biggest applied field maybe for the automobile market is huge and the demand of resin in rearview mirror, tires and other parts is big. In 2016, the sale volumes in automobile are 6574 MT, taking 37.93%. According to the different properties, AES can be divided into general grade, high impact grade, heat resistant grade and other. General grade is used most widely and the price is the lowest, in 2016, about 47.59% of the global sale volumes are general grade.

Japan, USA, Europe and China are the main consuming regions, Japan is the biggest consuming region in the world, in 2016 consuming 8196 MT AES resin. USA is the second biggest consuming region and consumed 3146 MT in 2016.

Over the next five years, LPI(LP Information) projects that AES Resin will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
