Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Agarose market for 2018-2023.

Agarose is a purified linear galactan hydrocolloid isolated from agar or agar-bearing marine algae.

Structurally, it is a linear polymer consisting of alternating D-galactose and 3, 6-anhydro-L-galactose units. Agarose are used in agarose gel electrophoresis, protein purification, etc.

The technical barriers of agarose are relatively high, resulting in high level concentration degree. USA is the largest producer, occupied about 66% production.

According to customer types, agarose is widely used in government, academic, industry, hospitals, pharmaceutical companies. And Agarose is most commonly used as the medium for analytical scale electrophoretic separation in agarose gel electrophoresis. In 2015, agarose for electrophoresis occupied more than 76.36% of total amount.

However, the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of agarose.

Therefore, to some extent, the companies face the risk of profit decline.

Over the next five years, LPI(LP Information) projects that Agarose will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
