The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aircraft Piston Engines market for 2018-2023. An aircraft engine is the component of the propulsion system for an aircraft that generates mechanical power. Aircraft engines are almost always either lightweight piston engines or gas turbines, except for small multicopter UAVs which are almost always electric aircraft.

This report studies the Aircraft Piston Engines market. The first airplane engines were of the piston or reciprocating type and this type of engine is still in use today. Piston engines were the only type of aircraft engine until 1939 when the first turbine powered aircraft flew. Piston aircraft engines reached their zenith during World War II. Aircraft developed for the war added superchargers and were able to fly higher and faster than any planes in history.

The North American market share, however, retained its position and decreased to 61.4%, which is its largest share of total deliveries in the past decade. The second largest market for Aircraft Piston Engine shipments in 2017 was the Europe region at 25.2%, closely followed by China at 11.2%.

Over the next five years, LPI(LP Information) projects that Aircraft Piston Engines will register a -0.8% CAGR in terms of revenue, reach US\$ 49 million by 2023, from US\$ 52 million in 2017.
