Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global AISG Connector market for 2018-2023.

AISG connectors are screw coupling connectors that are designed according to the specifications created by AISG (Antenna Interface Standards Group). AISG connectors are mostly seen with 8 contacts and employed in BTS, TMA, RET devices and control cables. Based on the open specifications by AISG, those connectors are widely implemented in industrial controls, data processing, medical devices, telecommunication network and marine applications.

We believe the major reason for the lack of growth is related to economic problems in Europe and the fact that the growth in global Gross Domestic Product (GDP) is lower than historical norms. Most believe we will remain in a slow growth environment in the electronic industry until the US GDP starts to improve. Besides, as a very important spot of AISG connector technology, Japan is close to slipping into recession.

In terms of the innovation system of AISG connector industry, China is continuously gaining potential of being the industry leader in both manufacturing and technology, along with the growing leadership of some global-level Chinese telecommunication suppliers such as Huawei and ZTE.

Over the next five years, LPI(LP Information) projects that AISG Connector will register a 1.4% CAGR in terms of revenue, reach US\$ 1080 million by 2023, from US\$ 1000 million in 2017.
