## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Albumin (as Excipient) market for 2018-2023.

Albumin is a water soluble globular protein produced in the liver. It accounts for 50% of blood plasma proteins. These play a vital role in regulating blood volume and act as transporters for molecules such as few hormones, bile salts, and ions. Albumin is commonly used as blood volumizer in rare diseases, burns, shocks, liver conditions, and other blood loss trauma and surgeries

Increase in usage of albumin as multifunctional excipient, shift toward usage of recombinant albumin, and grant of regulatory approvals are the key factors driving the market. However, high cost and expertise required to set up production plants and stringent regulatory criteria restrain the market. Emerging markets such as India, China, Brazil, and South Africa present significant opportunities in the albumin as an excipient market owing to growing contract research manufacturing.

Over the next five years, LPI(LP Information) projects that Albumin (as Excipient) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Albumin (as Excipient) market by product type, application, key manufacturers and key regions.
