In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Alkanolamide market for 2018-2023.

Alkanolamides are a class of nonionic surfactants that include Monoethanolamide and Diethanolamide chemistries and are commonly used in chemical compounding applications as humectants, conditioners, emulsifiers, wetting agents, thickeners, foam stabilizers, and more. Alkanolamides are typically used in Personal Care Products, cosmetic, and toiletry applications as well as household, institutional and industrial (HI&I) applications in a wide range of products.

Alkanolamide industry has low technology barrier and is labor intensive industry.

Currently, there are several producing companies in the world alkanolamide industry.

In consumption market, USA and China are the mainly consumption regions due to the bigger demand of downstream applications. In 2016, these two regions occupied 61.42% of the global consumption volume in total.

The major raw materials for alkanolamide are palm oil, coconut oil, ethanolamine, and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of alkanolamide. The production cost of alkanolamide is also an important factor which could impact the price of alkanolamide.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents fluctuation according to the economy development status and international competition. Also, there is fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Alkanolamide will register a 1.7% CAGR in terms of revenue, reach US\$ 630 million by 2023, from US\$ 570 million

in 2017.
