## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global AlN Ceramic Substrates market for 2018-2023.

Aluminum nitride (AlN) is the only technical ceramic material that features an extremely interesting combination of very high thermal conductivity and excellent electrical insulation properties.

Aluminum Nitride (AlN), a covalently-bonded ceramic, is synthesized from the abundant elements aluminum and nitrogen. It does not occur naturally.

AlN is stable in inert atmospheres at temperatures over 2000°C. It exhibits high thermal conductivity but is, uniquely, a strong dielectric. This unusual combination of properties makes AlN a critical advanced material for many future applications in optics, lighting, electronics and renewable energy.

About the statistic units "Piece", it means a piece of AlN ceramic substrates, like the standard size 5.5\*7.5 inch, 4.5\*4.5 inch, 2\*2 inch; 3\*3 inch etc.

In 2016, the global ceramic substrates revenue was 40.7 million USD and it will be 75 million USD in 2022, with a CAGR of 10.7% between 2016 and 2022.

In future, the ceramic substrates market will maintain rapid growth, driven by the strong demand from IGBT, LED, automobile, communication, aerospace etc. and the emerging regions like China, India and Southeast Asia will play more important roles. Over the next five years, LPI(LP Information) projects that AlN Ceramic Substrates will

register a 10.3% CAGR in terms of revenue, reach US\$ 83 million by 2023, from US\$ 46 million in 2017.
