In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aluminium Sulphate market for 2018-2023.

Aluminum sulfate is a chemical compound with the formula $Al_2(SO_4)_3$. It is soluble in water and is mainly used as a flocculating agent in the purification of drinking water and waste water treatment plants, and also in paper manufacturing.

Aluminum sulfate industry concentration is relatively low. Chemtrade is the largest aluminium sulphate manufacturer after the acquisition of General Chemical.

There are two types of aluminum sulfate: common grade and iron free grade. Iron free grade aluminum sulfate is suitable for use in some high quality papers production. Iron free grade aluminum sulfate occupied about a quarter of global total aluminum sulfate production.

Aluminum sulfate is mainly used in paper production and water treatment. About half of total aluminum sulfate production is used in the paper-making. And paper production and water treatment together occupied more than 90% aluminum sulfate.

Over the next five years, LPI(LP Information) projects that Aluminium Sulphate will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
