In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aluminum Cans market for 2018-2023.

Aluminum cans are the most sustainable beverage package on virtually every measure. Aluminum cans have a higher recycling rate and more recycled content than competing package types. They are lightweight, stackable and strong, allowing brands to package and transport more beverages using less material.

Aluminum cans are recycled over and over again in a true 'closed loop' recycling process. Glass and plastic are typically 'down-cycled' into products like carpet fiber or landfill liner.

Aluminum cans are unique in that they are most often recycled directly back into themselves meaning that the average can has a very high percentage of recycled content.

Over the next five years, LPI(LP Information) projects that Aluminum Cans will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
