The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aluminum Chlorohydrate market for 2018-2023.

Aluminum Chlorohydrate (ACH) is a high basicity, highly polymerized coagulant that has little effect on alkalinity and pH and is ideal for treating low alkalinity source waters. Due to its higher ion activity, ACH can generally be dosed at lower feed rates reducing sludge generation. ACH is also used as an additive in a broad range of industrial manufacturing applications where higher levels of aluminum (aluminum ion) are required.

The major raw material for aluminum chlorohydrate is aluminum ash, activated bauxite, hydrochloric acid, etc. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of aluminum chlorohydrate industry.

We tend to believe this industry is an emerging industry, and the consumption increasing degree will show a smooth growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Aluminum Chlorohydrate will register a 2.4% CAGR in terms of revenue, reach US\$ 76 million by 2023, from US\$ 66 million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Aluminum Chlorohydrate market by product type, application, key manufacturers and key regions.
