In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Aluminum Fluoride market for 2018-2023.

Aluminium fluoride (AlF₃) is an inorganic compound used primarily in the production of aluminium. This colorless solid can be prepared synthetically but also occurs in nature as minerals rosenbergite and oskarssonite.

Aluminium fluoride is an important additive for the production of aluminium by electrolysis. Together with cryolite, it lowers the melting point to below 1000 °C and increases the conductivity of the solution. It is into this molten salt that aluminium oxide is dissolved and then electrolyzed to give bulk Al metal.

Over the next five years, LPI(LP Information) projects that Aluminum Fluoride will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Aluminum Fluoride market by product type, application, key manufacturers and key regions.
